## Notes to submitted articles

The quality of the material we can publish in Dragon User must be to a very good standard and the quantity of the discourses that you can make with your Dragon. The Dragon computer was launched on to the market with a powerful variety of discs but with very poor documentation.

Articles which are submitted to Dragon User for publication should be no more than 3000 words long. All submissions should be typed. Please allow extra margins and a double space between each line. Programs should otherwise be as complete as possible on paper where paper and no screen required by a copy of the program.

We cannot guarantee to return every submitted article or program, so please keep a copy. If you want to have your program returned you must include a stamped addressed envelope.

# Contents

## Letters

Including the month information on key functions, a plus from Interactive Software and a special offer from Sharp

## News

A round-up of the 1985 show dates of Premier's Clientel and the latest on new software and packages

## Dragonsoft 11

Our reviewers tackle the latest arcade, educational, utility and graphics packages

## Bargain software 15

Your last chance to obtain a selection of games and adventures from Computer Games at a reduced rate of £1.99 off for readers of Dragon User

## EPROM blowing 16

Keith and Steven Khan review the well designed EPROM programmer from Share-a-Chipotic, Supply company

## Made in Spain 19

Santa Rosa interviews Eduardo Merga, president of Eurosoft SA, the Spanish manufacturers of the Dragon

# Editorial

IN THIS issue there is a very message in all of it that the Dragon is not dead yet. Rumours of the Dragon's imminent imminent demise which have been the subject of Dragon Data news are somewhat exaggerated.

There was an excitement about the 1600 shown not seen since the early ZX Spectrum, when The Captain Hat of Waddington was filled with walking wall people. Software and hardware, especially on titles at discount prices, were sniffling like there was no tomorrow. But then many Dragon users are scared that there will be no tomorrow.

Dragon's future has been the subject of considerable debate ever since Dragon Data went into receivership and sold the manufacturing rights to the 38 and 64 to Spanish company Eurosoft. The purists have been predicting a rapid end to the machine with nothing to compete in support is dying fast.

Generally the retail press have ignored these shades of Dragons and Dragon software as fast as possible. Equally I know software companies specialising in the Dragon have given up converting their programs to other machines. Few of them are writing new Dragon programs. Commodore, Sinclair, Acorn and Amstrad are the hot machines now.

Nevertheless, the Dragon has undergone something of a renaissance in recent weeks. Stories continue to tell of successive of unheralded machines have found low price Dragon being snapped up by bargain hunters. Similarly, mail order software houses have seen a resurgence in business as Dragon owners discover they can no longer buy software in their local stores.

Perhaps the most encouraging news comes from Eurosoft's plan to sell an enhanced 64 in the UK. Whatever the size of the existing Dragon user base, the machine will only have a long-term future if it is followed by new models.

## King of the hill 23

Daily Coke and Splurge are out to get you in P Thompson's Clientel game — our program of the month (front cover by Mike Herond)

## Reach for recursion 31

Paul Drivens shows how to program in recursion — a special type of program structure

## Open file 33

Reader's programs this month include a sound in light listing, a short utility for UltraBase users, a matching pattern and a racing game

## Bookbytes 41

Two basic books and an adventure game guide are put under scrutiny

## Adventure trail 43

## Dragon Answers 45

Brian Clegg offers advice on moving DRWNet characters, saving graphics and colouring the start and end exec locations with the Dragon 6400 calculator function

## Competition corner 50

Colin Software offers the prize to Gordon Lewis puzzle

# RETURN OF THE RING

THE RING  
OF  
DARKNESS  
PART II

At last the saga  
continues...

The Dominion of Sauron is defeated, but the Hell spawn horde of the Evil King is still there. Rose Mungomery, wielder of the Four Ring of Rings, must face the greatest challenge to return the Ring of Darkness to its creators on the hidden planet Mungoword... And everywhere at the ends of time the forces of evil are preparing their revenge.

After one year of development, Wintersoft are proud to present the most sophisticated game ever created for the Dragon 32. Written 100% in machine code, RETURN OF THE RING is an astonishing multi-processor blend of superb high resolution colouring techniques and advanced routines that allow you to communicate with your computer in complete sentences. You will face challenges and adventures as you and your Ringworld companions travel a mysterious planet and brave the dangers of an exciting three-dimensional forest scene. An epic adventure unequalled for its wealth of detail and diversity.

May luck travel your path.

Please note: RETURN OF THE RING is a complete adventure. You need not buy THE RING OF DARKNESS to play it.

## Missing manual

I PURCHASED a Dragon 32 sometime ago and the previous owner left the instruction manual. If any reader has a spare manual or doesn't use their manual and would be willing to part with it, I'd be grateful if they would get in contact with me.

B. Eder

## Smooth operator

WITH reference to the robotics program by Bill Bishop in the November issue of Dragon User (Open the sections I would like to improve on the program by making the 3-D graphics smoother).

Look at type in the program as listed in November and then type in the following lines of program:

1 POURA 3 PMODE 4 5 POLS  
260 PMODE 4 5  
460 FOR A=1 TO 4 POUTA+4  
TD M MODE N  
460 PMODE 4 5 POLS  
560 PMODE 4 5  
760 FOR B=1 TO 4 POUTB+4  
TD M MODE N  
760 PMODE 4 5 POLS

The program will now draw the frame of the robot as though on page five (not copy it to page one). The effect looks like the program off well.

Leslie Ross  
Lancastershire

## In search of Trackers

WE HAVE had a fantastic response from readers to our offer for BackTrack using the £1.20 ad taken published in the October issue of Dragon User. However we have received some orders that we are unable to send as all we have received is a postal order and the recipient will be name and address.

Any readers who have sent a postal order in location and have yet to receive their copy of BackTrack please either write to us at the address below, or phone me on 01744 661818 giving details of

This is the chance for you to voice -- send your tips, comments and complaints to Letters Page, Dragon User, 10-12 Little Heywood Street, Luton, Bedfordshire MK1 1PP.

their home address and the Post Office from which they obtained their postal order so that I can clear up those orders and send off copies of the game.

## Twist or stick

MANY THANKS for your review of Cecil Page 21. Having taken your Judge's comments very much to heart, we have subsequently corrected the faults.

As we have said in a number of forums over we do try to respond fully to our customers and would like to inform them that anyone who has a copy of Cecil Page 21 can return it to us as we will be returning paid, used yet only a corrected version. But, as a shareholder of our gallery by way of compensation

Howard James  
Sun Software

Woking  
Surrey GU1 3PA

## Scramble to the rescue

I HAVE had several inquiries regarding my program Scramble Scramble published in the October issue of Dragon User. Most problems are caused by incorrect data entries in lines 2910-2930. The program is as follows (listed Newline): Any mistakes having problems open send me (Mr. Dragon User) a blank tape and a large SAE for a free copy of the program.

Steve Gellatly

## Function key routines

I RECENTLY interested to read Peter Rotherham's article on function key facilities in the October issue of Dragon User. I have been experimenting with his method of writing BASIC routines and found that for some routines at least, it does not work. Inspection of the ROM instructions at these entry points shows why these routines need not be taken. In fact the next character after C is to be loaded into the A register. Also, the CC register is unimportant and does not need to be set with

APR001 #HFE in the ones I have tried. Below is a listing that calls the ROM routine in sequence. To prevent bugs:

Machine code PC-3 ROM0911  
CIRCLE170-180-190  
The instruction can also be used with other languages. I use it to call these functions from ROM in my MICROSTAC RG ROMP1. T1 does not have these calls, but does allow machine code calling ROM.

**THE CHINESE COMMUNIST PARTY** has been the most active player in the struggle against the United States since the early 1950s. It has sought to expand its influence over many other countries, particularly and substantially those in Southeast Asia. The Chinese Communists have been able to do this because their Party has a large number of well-trained and well-educated members who are willing and able to work for the Party's ends.

The logo for Microdeal features a cartoon illustration of a young boy with brown hair, wearing a red baseball cap and a blue t-shirt. He is holding a black steering wheel with both hands. The word "MICRODEAL" is written in large, bold, black letters across the bottom of the logo.

# 6809 round-up

**AUST. CRASH** 7,000 people attended the 6809 show for Dragon and Tandy Users held recently at the Royal Horticultural Hall in London. Queues formed early on the first day and as one user's car was impossible to move between the Mayday and Microshow stands, an enthusiast sought to do battle with the Mayday owners in single file.

Most major Dragon users' groups had a stand although Touchmaster and Eurocard 64, the Spanish manufacturer of the Dragon, were notable by their absence. Cuckoo did however dominate the Dragon 64's six prices for a coffee

and had two senior officials in attendance.

The members of the cult were: David Sudd of London, J. H. Bingham of Surrey, and J. Reilly of Gloucester.

Most exhibitors did a thriving trade, with a number of software companies running out of stock on selected titles. John Sykes, managing director of Microdata said that an extra shipment of the latest release, Ice Castles, had to be sent up on Saturday and this quickly sold out on Sunday. Everything sold well said John, "even reprints and 16k's."

Microdata also announced that 13 of its titles will now work on both the Tandy and the Dragon. These include its new releases Speed Racer, World of Flight, Ice Castles, Dragoncon, Devon Seed and Chameleons together with four of Microdata's own Microdisk 16k releases. They are: Perguss, Diary Computer Software, Mystery of the Java Bee and Empire.

Computer Marketplace, the show organisers, announced that they hope to have another 6809 show in March either at the University of Manchester or at the Holborn Leisure Centre in London.

**CHAMBERS** J. Chambers was selling his Mystery Adventures games. These are cross-dialectic titles for the first Dragon and Amiga and are set in the medieval town of Kingsbridge, comprising the King's Castle, the King's Palace, the Queen's Palace, the King's Chapel and King Williams' castle. Chambers' company also wrote Falconsoft Adventures with three different adventure titles.

**PERGUS** Pergushouse of Pergus was selling Tim Lister's combat computer game. The original and second editions included a score of 100... no repeat score by a single player. There were 1000+ releases. The author is Tim Lister, a former software engineer with the BBC and the BBC's software division, BBC Research and Development.

**IMPUSENS** Impusens are an addition to the Dragon in this country. Their London-based range includes microsystems, monitors and computer systems. An prices were slightly reduced on the show and the original printed price book contained 1000+ copies. Many copies available at greatly reduced prices in evidence on the stand of the show.

**JULIANA'S** Julianas announced that they are introducing computers to schools. The company was selling 10 types of other educational programmes.

**JOHNSONS** Johnsons were showing off the combination of the new Joystick light pen in an adventure and game.

**PETER PHILLIPS** Author of Eddie Phillips and his band, Peter Peter, were making their show debut.

## Dragons at Comet

**COMET** the high street retail chain has obtained stocks of Dragon 32x, 64x and disk drives from DEC.

The Dragon 32 is being sold for £79.99 and the 64 for £129.99. A single disk drive plus controller is going for £17.99.

As a special offer Comet is also selling the Dragon 64 plus disk drive and controller for £229.99.

Stocks are available at most major Comet stores, and a system called the Famicom offers them a branch without sales.

As reported last month in Dragon User DEC has just sold its entire stock of Dragon computers and peripherals. The majority of the stock went to Eurocard and Comet has acquired its share. It is not known what continues Comet has obtained.

## No sign of touch-pad

**TOUCHMASTER** is touch-sensitive just launched at the PC Show in September. Paul and Gail made available for the Dragon at the time of going to press.

Review models for the Commodore and Spectrum arrived several weeks ago but despite intense efforts to obtain a Dragon version nothing has been seen.

George Myres, Touchmaster's public relations company, said that such a Touchmaster would not be producing a Dragon interface. This statement was later taken back, and both Touchmaster and George Myres said that a Dragon compatible pad is on the way.

# Premier go under

PREMIER Microsystems, manufacturer of DataDisk, the first disk drive system for the Dragon 32, has ceased trading.

All telephone lines to the company have been disconnected and none of the directors could be contacted at the time of going to press. Lack of sales following Dragon's data storage is thought to be the reason for the wind up.

Comments contributed by Pre-

mier's data system would reveal no comment as to what had happened, but did disclose that they would be parting off what remaining stock they had. Prices were marked down at the £600 stage.

Ted Gorychuk of Computerware said that Computerware will be putting a new management for Premier's director.

No further details are available.

# Versatile software

PHARMERS and pharmacists are now reaping the benefits of the Dragon with the arrival of various programs from two software houses.

Rungis, a high level structured language which is up to date compatibility with most computers and mainframes is being used by Troth Data to market a pharmacy labelling package.

The pharmacy labelling and automated stock recording system works on the Dragon 32 using ASCII standard runps. The package provides facilities for printing labels for medicines as well as automatic warning instructions to patients for the drugs dispensed. An optional stock check can be held against each product.

The Dragon contains under codes and has its own registration number. The software must produce both repeat registration number and writing location. Further details from Harvey on 01 382 2910.

glas. Online help is available for answering each prompt with a "?"

Rungis is a block structured language similar to Logo in structure and hopefully with some commands resembling Basic. It was developed in the United States as a computer operating system and programming language designed to cope with large Hospital Information systems. It has been in coping with that resulted in it being adopted in the business and commercial field. Further details from Troth Data at 54 Main Street, Croydon, London CR0 2UZ.

From Parussoft comes several agricultural programs covering, arable and dairy herding. There is a pig program, an individual milk production program, management and ration formulation programs, cash accounts and cash planning programs.

Many explore for its programs. Parussoft adopted the Dragon 32 after looking at 11 home computers comprising such things as price check and zone.

Further details from the company in Farnham Sales Office, March, Petersfield, Hampshire.

coded and has its own registration number. The software must produce both repeat registration number and writing location. Further details from Harvey on 01 382 2910.

## Hareraiser

HARERAISER PROG.R, the computer program which puts you in control of the Jewish Harp of Manduranga, is now available for the Dragon 32 and the Retailing for £14.95 the program and its precursor Hareraiser Produc... are essential for treasure hunters in search of the golden harp.

The harp is worth £10,000 and the player has the option of either finding the harp or £10,000. The first person to locate the hidden treasure wins the prize.

Each tape is specially

## TOP VALUE LIGHT PEN

DRAGON 32/TANDY COLOUR 32K/SPECTRUM 48K

THE NEW ADVANCED PROGRAM  
for the Trojan light pens include the following facilities:

- DRAW BOX
- DRAW CIRCLE
- DRAW LINE
- DRAW PICTURES FREEHAND
- COLOUR FILL DESIGNATED AREAS
- SAVE AND LOAD PICTURES
- TO AND FROM TAPE
- FULL KEYBOARD FACILITIES

All in 80x60 screen in any of 4 colours for the Dragon/Tandy and 8 colours for the Spectrum.

- DATA ENTRY AND PROCESSING
- MENU SELECTION AND CONTROL
- GAME PLAYING

This is a free class program which gives hints and tips on how to write programs for the pen. Ideal for many educational uses.

A top quality pen plus a free class program.

## Air attack

Program: Fury Missionary II  
Trend Lead (S) Avant! Computer Plus SJC Price £8.99

ALTHOUGH games are not offered as one of the features on the Dragon's games writers are relinquishing to produce them to good effect at some of the recent jamborees they seem fury is one of these and they best appear in the late frame.

The theme is aerial combat in a classified site for some secret somewhere in South America. You control a tiny plane in the centre of the screen that does not change its position merely turning to face in a different direction as you move the joystick around. The background moves in the opposite direction to the plane across the screen and this creates the illusion of movement.

Pressing the fire button produces a stream of bullets that go in the direction in which your plane is pointing. These can be used at the many enemy patrols that come after you and this naturally increases your score. There are also several paratroopers that float gently across the display.

The effect is visually very good and would look excellent if the Dragon produced colour. I feel if it did it would look best in black and white. If you can cope with the darkness that comes through staying too long in the fiery streams passing by, you may be awarded another score place as you pass the drop.

I'm not sure about this game. It looks good but doesn't really get anywhere. On one occasion I left the plane pointing at the top of the screen and just sat on fire. Whether I was simply lucky I don't know but anything that comes close disappears with a bang, my points increased to zero and I almost pitch up after half a minute of no end of firework. Then suddenly a magnetite mine appeared from nowhere and took up my remaining place in seconds — so please if you fancy your chances against the Red Baron you may enjoy this game, but I found it a little on the tame side.

John Barnes

## Hunchback

Program: The Hunch (Bally Computer Games) 10 Crossways, Lutterworth Road, Bally, Leicester Price: £1.99

IT SEEMS that the latest game to get the Space Invader treatment is the Hunch back type of game. Yet another version, The Hunch has been produced by Bally Computer Games.

The notable features of this version are that there is both a joystick and keyboard version included on the one tape and that it is VERY fast so fast that I found it almost unplayable with a joystick as the

initial touch sent Quasimodo halfway across the screen. All the other usual features of Hunchback are there, arrows, guards, and so on. There are no screens to get through — I didn't get to the end so I can't say what happens in the version.

Personally I prefer Quasimodo's version of Hunchback.

which is much more playable and has one extra screen. If you really want a Hunchback game then take a look at all of those available —

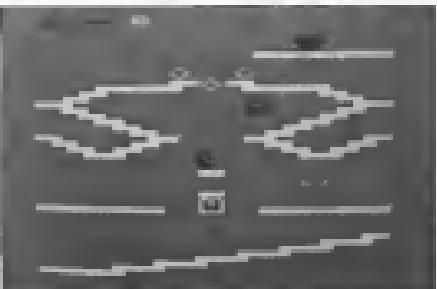

you play your money

Brian Dodge

## Evil Orbits

Program: Perilous Pit Baby Computer Games 10 Crossways, Lutterworth Road, Bally, Leicester Price: £2.99

PERILOUS PIT is an arcade-style game set in the rather unusual location of a mine. The player has to guide Babs the mine-pet. The Draedus Orbs and his Grauges collect some crystals and put them in his truck. This is achieved using the joystick to move and the fire button to jump.

Jumping around too much brings to life The Draedus Orbs who turns out to be a little boy, complete with feathered hat, and (messy) hair more than a quick clean around the crystal mines. Actually who or what The Draedus Orbs is, is never explained (it certainly isn't obvious from the graphics) neither is the reason for wanting to

and however that the game does sell for £2.99 and I have seen worse games go for £4 or more but then that's totally irrelevant. A range of cheap software is a very good idea but only if the quality is maintained.

David Atkinson

## Educational

Programs: Macmillan and Spottis P.J Paul The Firebirds, Red Lion Street, Chichester, Sussex RH9 1EZ Price: £8.99

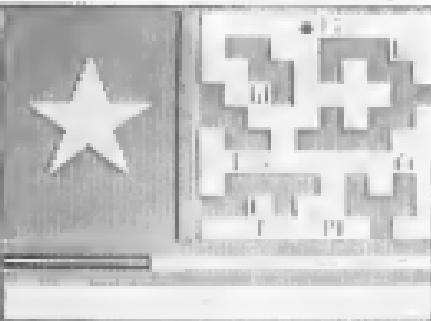

BOTH of these programs have been devised to enable children (seven- to 10 year olds according to the instructions) to test their knowledge of ani-

mals and common and spelling of English words. As such they fall firmly into the Educational type of program packages.

The packaging in this case is an ordinary cassette box with a (poorly) printed instruction sheet. The instructions provided bear on the sheet and the programs are clear and easy-to-use; however, if children are to use the programs an adult would probably have to read them first and then de-

• Explain how to use them I found, however, that my seven to 10-year-olds were able to work out how to use the programs even without the instruction sheet. Ease in the programs themselves.

Spelling is the weaker of the two programs. The screen display appears to be designed to represent a letter set production line with a supply of随时 animated working parts. To the accompaniment of suitable music a piece is lowered on to the "line" or its track either a word or an unbroken expression is written. The player has a limited length of time to express the word whether the said display is opened or not by depressing the "M" or "X" keys for an incorrect spelling or turns while the "B" or "D" key needs to be pressed if they are considered to be correct.

A set of five questions are answered correctly and the game will progress to the next level of difficulty. There are levels at all and it requires no start a game at any of the levels. This works out well for the arithmetic problems but fails when on the spelling one as I found that my children were having difficulty in deciding what word they were attempting to spell in some cases as they only had an incorrect rendering of the word as a guide to what it was. There were no guides to help. However it is used was adequately good and the player answered that it was correct the only bad spelling was given.

In the spelling test version of Mathematics the player is given a simple picture together with made which contains a number of mobile letters which are fetched by a little man who is himself

moved around the maze by means of the control keys. When he reaches the desired letter the player must press the splasher and the letter is removed in the last position available on the bottom line of the screen. The correct number of blocks are given to spell the required word. More letters are provided than are required to spell the word.

Similarly in the arithmetic version of the program the player is given a simple task to perform given a number of digits and operators which are to be found in the rules. They are assembled to give the required expression in the same way as the spelling program. In both cases the player is corrected upon giving the incorrect answer.

This is quite a good program in that the graphics and sound are attractive and my children enjoyed playing with it.

be able to enter a new set of words to be used. These could either be entered by the teacher or parent or as a

separate data file.  
Top-up Cheque

## Mathematical

Program: Teach Me A2 Soft Version: 4.04 Game Exchange Building Hattingley Valley Manchester M4 8QY Price: £9.45

THIS TAPE aimed at primary school children aged seven to 11 deals with elementary mathematics — the four rules of numbers.

Children are asked to choose between addition, subtraction, multiplication and division and find and easy system each time such as They get three chances to

solve. Any program purporting to teach should at least leave the user with some extra skill or knowledge. This does neither.

translate this sort of program and the result would be again buying a program which costs it will teach you Russian is useless a wretched score and you have to translate it if you get it wrong then guess a gives the translation and then goes on to another word.

After a hundred or so times a might expect that I doubt if you will remember that having glance at the Russian and English equivalents — and

SOFTWARE  
PRESENTS  
EVERYDAY MATHEMATICS  
FOR ALL AGES  
TUTOR 120, 160, 190 & 210

Make the right answers and avoid the high or too low score mistake.

Each response is tested to see if it is right or a second and third information is printed on the screen when the user answers the question correctly. After 10 questions they are graded from You must try harder onwards.

Now what trying harder has to do with hitting the right answer to a series of random questions I don't know. Presumably if you knew how to take 211 from 569 then you'd do it. But something is for sure — if they couldn't when they started then best they could do Teach Me for 100 years and yet get no closer to being able to

have long would it take for you to be able to compare with the man in the street in Kiev. Most likely he like I did just keep trying until this would be laughed out of court but we pass the sort of thing in front of children and expect them to learn from it.

The program is only learned by some apparent sorting and grammatical action. What is 74 divided by 8? or how about Go and have another try we have it.

However math software companies can put out the sort of thing is quite beyond me. Mike Harrison

## Graphical data

Program: Instant Graph Plotter R&P International Computer Services, PO Box 129, Marlowe, Canterbury, ME4 2UA Price: £12.50

This display of data in graphical form — and I use the term in its widest mathematical rather than computer

sense — is the most common form of presenting data usually. Instant Graph Plotter is a program that does just that but it is much more than its title suggests.

Once the basic data is entered, guided by on-screen prompts, the graph is drawn on the screen either with an on-screen cursor or in conjunction with other graph held by the com-

# Dragon software at a bargain

Discount software is now available through the medium of the Dragon User club - this month save £1.50 on each of these games and adventures from Computer Rentals

THE Dragon User Discount Club is designed to save you money. This incentive applies to software which is only open to members of this magazine. Features are software titles for the Dragon 32 from Computer Rentals. Each game has been reduced to £5.45, down from £6.95. To enter your game(s) simply cut out the coupon on the page and send it, together with a cheque or postal order to: Dragon User Discount Club, 13-15 Little Newport Street, London WC2H 1JZ.

### FROGLET

### Froglet

A busy river road and a fast flowing river are the obstacles you must overcome in guiding the Froglet safely back to the safety of their home. The better you get, the harder the task - *... and ...*

### SKIER

### Skier

Try your hand at snow skiing in

giant slopes run negotiating a series of hidden gates and avoiding the trees. The program is a 3D perspective simulation with five runs

walls to be taken into account

### Laser Racer

Designed by Matrix software for Computer Rentals. Laser Racer puts you inside a huge computer. As the owner of a space age laser racer it is up to you to reach the computer's central processor and destroy it. Joystick or keyboard control!

### St George and the Dragon

Slippery bridges and treacherous Dragons impede your progress as you attempt to save the Kingdom. Send across the sword to split the magic shield and fit the curse from the castle and its master. Mouse includes accessories, your joystick or keyboard control.

### Keys of Roth

An adventurer in search of the keys, you must use your power of deduction and determination to overcome the difficulties of the caverns. Crocs, moles and the giant Jab-japes are out to stop you in your quest!

### Holeshot Out

Boggs, boggs an abominable pit pit are all possible on this one- or two-player hole-hopping game. There are boulders, holes, trees, gorge bushes, the rough and gushing

# Blowing on an EPROM

Keith and Steven Bratt review an EPROM programmer

In THE September 1984 issue of *Dragon User* we reviewed the impressive 40020 I/O port interface from James Carpenter's Bloody Company, and in this issue we return to have a look at a new EPROM programmer from the same source.

EPROMs differ from ROM in that they are non volatile (retain their information when the power is removed), and a blank (empty) EPROM has all of its bits set to digital 1. A new EPROM is initially in this state, and a used EPROM can be returned to its original condition by suitable treatment with ultraviolet light in a special erasing unit. The actual programming (writing) of an EPROM involves setting every setting appropriate bit in the device to logic 0 to code for the required machine code routines by applying a suitable voltage.

## One-line device

The essential difference between a ROM and an EPROM is that the former is a one-time device whose contents can never be changed. In addition, programming the image for a ROM is a costly procedure and they are therefore only really useful for long runs of unchanged routines. In fact a recent made many home computer users that the ROM is really an EPROM.

A first sight the programming unit looks familiar as it uses essentially the same custom ASIC cartridge as the 40020 and I/O port with its supporting logic and secure connection to the Dragon cartridge slot. Notable differences however are a ZIF (zero insertion force) socket on the top to help the EPROM safely and securely and a pair of LEDs (green for power on and red for programming voltage indication) on the front.

Using the lid reveals a densely packed circuit board (once again bearing the logo of James Electronics). The programmer board was a production unit (poured in

- 9 LOAD FROM MEMORY
- 10 SET DECODE TYPE
- 11 MOVE MEMORY BLOCK
- 12 QUIT

Figure 1: Main menu functions

the power supply) so it's user-friendly. Take note that a menu driven software structure (figure 2) to control the unit over the novice programmer can operate the unit without difficulties, and without recourse to the manual. On load up the memory map is interrogated (figure 3) with a 16K block of RAM (assumed here to be the 64K) set aside to provide an image of the EPROM contents. When an EPROM is programmed it always uses the current map contents as the data source.

One unit is only recommended for the Dragon 32 as the extra power consumption could possibly overtax the harder worked supply on the 32. A DC/DC converter providing at least 25 mA is used to generate the low output voltage levels required for different devices (which range from 3.5 to 25 V) and the requirement of the ferrite core processor is a variable rated voltage as it works. Accompanying the unit is a comprehensive 11 page user guide which describes the operation in clear detail.

An important feature of the programming unit is its 'user-friendly' take which uses a menu driven software structure (figure 2) to ensure that even the novice programmer can operate the unit without difficulties, and without recourse to the manual. On load up the memory map is interrogated (figure 3) with a 16K block of RAM (assumed here to be the 64K) set aside to provide an image of the EPROM contents. When an EPROM is programmed it always uses the current map contents as the data source.

## Automatic configuration

Up to 12 different types of single line EPROM are supported (figure 4) with the unit being automatically configured for the selected EPROM type by simple software selection via the keypad with the SET DEVICE TYPE option (rather than the usual option of having to set up a complicated series of DIP switches.)

TYPE	VOLTAGE
27000	20.00
2716	20.10
2732	20.20
2732A	20.20
2756	20.40
2756A	20.40
27128	20.80
27128A	20.80
27160	TPA notice

Figure 4: EPROM types supported by easy-build unit

The 25 pin ZIF socket is used for both 24 pin and 28 pin devices, and the ready built unit is effectively 'fault-proof' against incorrect insertion of an EPROM. First of all the socket is normally in a 'short-down' condition so that an EPROM cannot be inserted into it alive (so to speak) and secondly it will automatically monitor the supply rails for error conditions which cause automatic shut down and display of appropriate error messages (figure 4).

The designers have even considered the possibility of aDragon user accidentally inking a component he turns off the VDD supply when a certain program seems not to want an even more valuable EPROMs. The only potential disaster remaining is incorrect selection of the unit (27000 or 27128 devices instead of the recommended 27160 or 27128A chips which need a lower programming voltage) so reading the small print on the particular type of chip before programming is essential.

The larger EPROM type can be changed in any time so that it is possible to combine the contents of more than one

Figure 5: Interrogated memory map

anted EEPROM and a larger device and the massive 256K EEPROM device is necessarily dealt with at two separate 16K bytes. Lower and upper address bytes can be specified so that operations may be directed to any certain parts of an EEPROM.

### Checksum checking

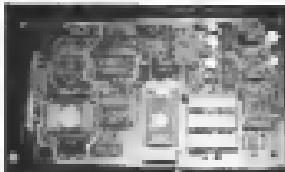

DATA intensive Intelligent Program Logic Algorithm (IPA) is available on the larger devices. Although it may be necessary to apply a voltage for up to 50 microseconds to change the state of a location, this time can often be reduced and IPA uses separated one instruction per byte. It drastically reduces the time taken to move a device by continually checking whether the required data has already been loaded at the current location, moving on to the next position as soon as it is successful.

LOAD FROM EEPROM transfers an image of an EEPROM inserted into the ZIF socket into the map and allows you to read (and hence copy) the contents of any EEPROM from any source. EMPTY CHECK checks each location in an EEPROM to ensure that it is blank before use, while CLEAR DATA sets all bytes in the "map" to the specified FF state.

LOAD/READ/COMPARE provides direct access to the map data which is displayed as a hex dump of dump and LOAD/EPROM MEMORY transfers the contents of any block of Dragon memory to the map. (For example you could transfer the contents of the Dragon's Basic EEPROM memory. Basic commands are still accessible.)

so that loading, saving and modification of programs can be carried out easily.

QUIT takes you into BASIC from where you can return to the programmer with EXEC &CODE for a "cold start" or EXEC &CODE for a "warm start" where the map data is preserved. COMPILE/EXEC/FILL DATA provides inversion (i.e. complement) of map data at this with any user-selected byte. MOVE MEMORY BLOCK allows reorganisation within the

"map" and LIST dumps the current "map" contents to screen or printer.

The SET ADDRESS/LIMITS function provides functionality by allowing the action of these commands to be restricted to defined address ranges. VERIFY provides comparison of "map" data and EEPROM contents, returning PASSED or FAILED - appropriately together with exact locations and EEPROM data. Useful

**CHEERLEAD-ON ZIF SOCKET  
CHECK EPROM CORRECTLY  
INSERTED!**

Figure 4. Example error message

access principles are provided to guide you through each of the functions.

A look at the prices and facilities of small dedicated EEPROM programmers shows that the Dragon programmer combination is a cost-effective solution for users who need to cope efficiently with numbers of EEPROMs for development or other-scale commercial applications.

Of course the cost above you to "lease" a PROTEC developed for any reason and although ready availability of an assembly line EEPROM expert may send shudders through the hearts of cartridge manufacturers, there are home applications which do not have such moral difficulties. For example, using programs transferred to EEPROM are instantly accessible and do not eat into available RAM.

### High standard

After all the EEPROM programmer is well designed and constructed, very user friendly and well up to the high standard set by the earlier Dragon add-on from Steven's Electronics.

(For a photocopy of the Pico232C port interface review published in the September issue send a large stamped addressed envelope to dragon user.)

Steve's Electronics is currently working on a range supporting software selectable addresses ROMs which will allow you to have a whole suite of memory instantly available. For further details contact Steven's Electronics Supply Company, 36 Castle Arcade, Cardiff CF1 2SW, telephone (0222) 419265. ■

EDIT + QASM/DEM0N QYNAFAST still the best for DRAGON and TANDY  
— call for details

## FLEX

Our implementation of FLEX is now available for both the DRAGON and DELTA disk systems. FLEX is a reliable and easy to use operating system with many happy users all over the world. It is the ideal operating system for the DRAGON — especially when combined with our DBASIC package. Requires DRAGON with 64K RAM.

- 48 KBytes FREE USER RAM
- 51 by 24 Hi-Res Screen with true lowercase, autorepeat, redefinable character sets, window etc.
- Supports single and double density for interchange with other FLEX systems
- Includes over 30 standard utilities
- Powerful Macro Assembler
- Versatile Text Editor

with Editor and Assembler £88.25 inc VAT  
special price with DBASIC £99.99 inc VAT

## DBASIC

£39.99 inc VAT

Now you can get all the benefits of FLEX and run your existing DRAGON BASIC programs with little or no changes. DBASIC moves the BASIC ROM into RAM and gives you extra commands to interface with FLEX.

- Standard 32K DRAGON BASIC — graphics page NOT moved
- Standard 32 by 16 Text Screen and 51 by 24 Hi-Res Screen
- Send Commands to FLEX from dBASIC
- Use up to 8 sequential or random access files simultaneously
- ERROR GOTO statement to intercept errors
- ERROR command shows you exactly where BASIC detected an error
- Load/Save programs as FLEX disk files
- Includes 5 example programs

## CRUNCH COBOL

£115.00 inc VAT

The most widely used business computer language is now available for FLEX. Runs on any FLEX system with 48K free RAM. Ideal for educational use as well as serious business applications. Contains most of ANSI Level 1 and many features of Level 2.

## DRAGON HARDWARE — WHILE STOCKS LAST

DRAGON 84 £185.00. Single DRAGON Disk Drive with controller £155.00  
Special Offer DRAGON 84 + disk drive + FLEX/ED/ASM/DBASIC £399.99 inc VAT

## XMAS SPECIAL OFFERS

Single disk drive + FLEX/ED/ASM/DBASIC only £260.00 inc VAT  
FREE 10 DISKETTES with every order over £250.00

Please phone or write for availability of FLEX/DBASIC for TANDY, Double Disk Drives, Disk Drive Upgrade kits, OS9 software

# made in Britain

Gordon Ross talks to Eduardo Mérigo, President of Eurohard SA

A REVAMPED version of the Dragon 32, together with a whole range of peripherals and add-ons, will be available in shops throughout Britain early this year. It will be distributed by Computerwise through several small distributors and will cover developing a nation-wide network of retail and other sales services.

The new range was designed by Eduardo Mérigo, president of Eurohard SA, the Spanish manufacturer of the Dragon at the 6000 show held at the Royal Horticultural Hall in London.

Eurohard SA has begun production of the Dragon 32 and 64 at its plant at Castellón in Spain, and by Christmas hopes to have sold 20,000 units — its advance sales total.

## HOW TOOK EL FUTURO DENTRO

It's not just the British who are interested in the Dragon 32 and 64. In fact, the Spanish market is one of the most promising in Europe. In this interview, Gordon Ross, managing director of Computerwise, speaks to Eduardo Mérigo, president of Eurohard SA, about the future of the Dragon in Spain.

An except from Eurohard's brochure

Early 'leaving' problems meant that the company did not start manufacturing the Dragon until November, a month later than planned. To meet the initial demand for its products, Eurohard purchased the remainder of GEC's stocks of the Dragon — 10,000 32s and 64s and disk drives, all at marked-down prices.

The Dragon 32 retails for approximately £2000 in Spain, and the 64 at £2500. At present, Eurohard is producing 500 units a day at its manufacturing plant. By early next year it hopes to be the number one selling micro in Spain and of the only two, not Eurohard, number two.

Eduardo's association with computers is relatively new. He graduated in economics from the University of Geneva and went on to study post-graduate work at a university in Montana in the USA. He has spent most of his working life overseas — 12 years at the Organisation for Economic Co-operation and Development in Paris followed by a few years at a similar organisation in Geneva.

Subsequently, he became a member of the board of Visa International and started his own computer firm, Disk Electronics which imported peripherals into Spain for the IBM PC and compatible range.

His venture into the micro-computer world was out of intellectual curiosity; it followed by the realisation that there was good scope to do a good job.

The drive to actually start manufacturing Dragons in Spain came from a number of people working for GEC — the Spanish importer of the Dragon.

Eurohard SA was formed in May 1983 with the intention of obtaining a licence to produce Dragons in Spain. An agreement was reached with Dragon Data and was signed just before Dragon Data went into liquidation. The company obtained the sole rights to manufacture Dragons in Spain (by sale in Spain and the Spanish speaking world) at a cost of £2 per micro.

Having accomplished what they set out to do, Eurohard was then forced to the view that Dragon Data had gone into liquidation and that their agreement meant nothing. The first few meetings with the accountants were difficult, however eventually Eurohard obtained Dragon Data's assets, including its intellectual property rights and the license for C1 nation.

## Enhanced models

Eduardo said that the purchase of Dragon Data made Eurohard the most difficult yet more exciting. Not being able to rely on Dragon Data meant that Eurohard had to go it alone.

Eduardo is very much aware of Dragon Data's mistakes. He said the biggest mistake a company could make was with regard to market forecasts. Poor management meant that there were not enough components at Dragon Data where there was a large demand for these products, but when demand fell there were too many components in stock.

In a competitive market companies

cannot afford to make this mistake. Eduardo also found fault with Dragon Data's distribution plan. He believes no large retail stores are the wrong distribution channel as there is no after sales service and little technical information available. Hence the desire to distribute Dragons in the UK through Computerwise. "I was impressed by their level of competence," said Eduardo, "we definitely want distribution of the Computerwise type."

...DRAGON

Eurohard's plan is to launch enhanced models of the Dragon 32 and 64 in March. The new models will be priced the Dragon 100 and 200 respectively. The 100 will not be available in the UK.

The enhanced version of the 64 will have improved graphical capabilities with perhaps a 16-way multiple interface board. At present negotiations are underway with Multicore in Spain the enhanced version will also have Spanish characters. All Dragons will also have the four arrow keys grouped together rather than on either side of the keypad as at present.

Dragon 32 upgrades will also be on sale. A converser kit already exists and a 15-inch monochrome monitor in Spain and Eurohard is soon to begin board manufacturing. Gec 32 boards will then be able to be exchanged for 64 boards.

A range of peripherals are also on the way. Eurohard is to offer a Dragon-compatible 4 colour printer (either 40 and 100 characters per second), a 3.5 inch flat disk drive using 80/160 tracks, and a sequential 2.8 inch floppy drive. The

Eduardo Mérigo, President

■ While it is hoped will do away with the need to use cassette recorders, it will cost about a third of the price of a printer and will take at most eight seconds to load.

The success depends on Eurohard's ability to reach agreement with software companies to sell software on the discs.

On top of all this Eurohard also expects to begin production of an M680 machine by the middle of this year. This machine will not be Dragon compatible, and will be sold as a separate line to Commodore's Visiage products. In Britain it will be distributed by DEC.

#### Games machine

Eurodata confirmed that Eurohard obtained the Microsoft license for Z8000 BBC. He sees the M680 micro as a games machine. "BBC is designed for a given market. I do not see it as being BBC compatible. It will be produced largely for export and kept for entertainment."

In contrast, Eurodata sees the role of the Dragon as primarily an educational and small business machine. An extensive advertising campaign has begun on Spanish TV television and, by the middle of next

year, a television programme will start with Eurohard taking a smaller role to that Uniphase by Acorn for the BBC.

The Dragon has already been bought by one regional educational authority in Spain and in some subjects there exists a small networking system. A master dragon is used by teachers with pupils teleconning on other master Dragons.

Eurodata is keen to encourage and utilize other people's ideas. It is important to use the creative efforts of a few people, said Eurodata. Software writers can contact the company with potential programs for appraisal.

At present, most adherence for the Dragon in Spain has been converted from BBC after our recently launched software companies have been getting into the act.

For the small business user Eurodata intends to use OS-9 as the standard

Over hundred units a day are being produced

operating system. Flex and Colorado is a very British product and is not found elsewhere. OS-9 on the other hand is fairly widespread and through it we hope to introduce people to UNIX.

#### Complete System

A complete package, called the Dragon 300, may also be offered to the small business user. This would incorporate a disc drive, operating system and memory — similar to what Compaq is offering users at present rather than a product along the lines of the stated Dragon Professional.

A six-month warranty is being offered to purchasers of the Dragon in Spain and Berger. At present, Dragons are being sold in Spain, France, Italy, Greece, Israel and the Scandinavian countries. Once Spain joins the EEC, Eurohard will focus an even bigger potential market, and it also intends to take on the Latin American market.

When Eurohard begins operation of its local manufacturing plant it will also produce system boards for the IBM PC and M680. An agreement has already been reached with two US manufacturers to produce boards for the European market.

Begiring this month, Eurodata intends to start advertising in the UK. We can't afford a £100 issue of that now, said Eurodata. "The new peripherals in particular for the sequential drive should be of interest to British customers of the Dragon." ■

## NEW!!! Dragon 14D interface for Voltmace Delta 14B Handsets

Interface plugs into cartridge port and joystick port. A Delta 14B handset (a joystick with a 14 button keypad) plugs into the interface. You can now write programs with many functions controlled from a single, neat, hand held unit. Ideal for flight simulators and graphics programs.

## FREE!!! With every Delta 14D interface

A CAD program using hi-res graphics. LINES, CIRCLE, ELLIPSES, BOXES, TRIANGLES, FILL in different shades. SCROLL up and down screen using joystick. GET and PUT to move or repeat shapes. Two sizes of text or graphics cursor. All this controlled from the hand held Delta 14B Handset. (Except text typing.)

This program is based upon the popular arcade game where you control a cube long-haired character while he hops all over a three-dimensional pyramid.

QBert must travel the cube pyramid, jumping on the two layers of the cubes, making the pyramid white. He goes fast by leaping on them and jumps from cube to cube desperately if he pants on the pyramid he has transported to a new pyramid.

Part 1 is the easy "Coley Cobbs and Goldsops the homeless cabbage in their beds" bring an end to Cobley by pushing him off the pyramid. Cobley can chase QBert all over the pyramid. The higher the level the faster he moves. Goldsop usually appears at the top of the pyramid and goes down following all in his path, but is known not to attack and will often teleport to a cube near QBert in order to follow him.

# King of the hill

Watch out for Splooge the homeless cabbage in QBert by P Thompson

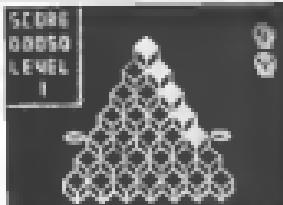

As a last resort the two hosting discs at the side of the pyramid can be used to transport QBert to the top cube of the pyramid. However, he has no problems at Splooge has a habit of popping intruders on the top cube to distract.

The game is quite hard for basic and you need it by typing CL.DAG and pressing the all powerful Enter key. Be very careful in entering the date in lines 50-120. If you make one mistake you could run off the graphics.

Copies of the game can be obtained for £3 plus a £1.00 fee. P Thompson, 54 Penhill, Port Talbot, West Glamorgan. The game works on both the 32 and 94.

## Program notes

0-30 Display game instructions and title page

32-40 Set number strings for the score display

47-108 Clear the score box and draw graphic bases for QBert, Goldsop, Splooge and Cobley

129-148 Draw pyramid

159-204 Main program loop

270-274 Move Cobley and check to see if he has taken off the gym mat

299-307 Move Cobley

307-329 Check to see if Cobley has landed on you or if Cobley has hit you

329-355 Check to see if whole pyramid is blue

356-357 Interval screens and end screen

351-365 Display score and high score

374-end Pyramid check routine (obviously) from line 329 and score increments for a real between screens.

We Guarantee you'll think we're CRAZY!!!  
*9 superb full length games on one cassette to feed  
 your hungry Xmas Dragon*

**£3.95**  
 for only

**INTERPLANET RALLY** (DATA COM)   
 An off-world racing game featuring a variety of space-based vehicles and galaxies.

Choose from four different vehicles for your intergalactic racing fun.

Great graphics and lots of action make this a must have game.

£3.95 for the superb full length game by DATA COM. 90k of impressive programming, spectacular colour graphics and sound effects.

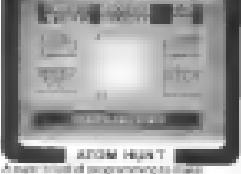

Order now and get ready for the most exciting game of the year!

**TIP-OFF** (DATA COM)   
 An exhilarating basketball-style game demanding fast accurate reaction. A unique strategy requires progressively more difficult features to choose from.

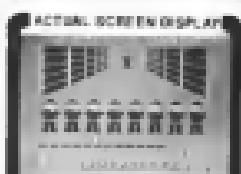

Graphics feature colour graphics and sound effects.

£3.95 for the superb full length game by DATA COM.

**AIR ASSAULT** (DATA COM)   
 A superb set of programming skills are required to play this superb game. You must plan a strategic assault to capture the game's objective and stop the enemy from taking hold of the important base.

£3.95 for the superb full length game by DATA COM.

**LASER PLAZA** (DATA COM)   
 An off-world racing game featuring a variety of space-based vehicles and galaxies.

Choose from four different vehicles for your intergalactic racing fun.

Great graphics and lots of action make this a must have game.

£3.95 for the superb full length game by DATA COM.

**LASER PLAZA** (DATA COM)

# BLABY COMPUTER GAMES

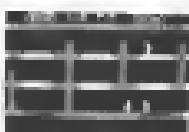

## THE DRAGON SOFTWARE COMPANY

**PERILS OF THE PIT** — Deep under ground in the crystal mines below the dragon's lair a foolish larva who has fallen into the dragon's lair is being chased by a pack of crystals — £1.99 screens

**THE HILLS** — You have probably read the novel or seen the film — now you can play the game. *Because Mountains Are The Best Way To Get Away From Being Chased By A Mad Dog And Ringers* — £1.99

**BLABY BURGERS** — Help Blaby the Dragon eat Lemons. They like them all you have to do is eat them before they catch you. *Blaby Likes Lemons — But Not When You Are Being Chased By A Mad Dog And Ringers* — £1.99

**LASER RUN** — Fly your starfighter down the corridor and save Earth. *Victory Is A Space Pilot's Dream And Survival Is An Adventure* — £1.99

**Watch out for next months ad for Dragon Gold at £3.99**

Send SAE for full list. Please add 50p P&P on each game. Most games will shortly be available on the TPS-80.

We wish to thank you all for your terrific support at The 6809 show.

BLABY COMPUTER GAMES, CROSSEWAYS HOUSE, LUTTERWORTH ROAD, BLABY, LEICESTER  
Telephone 0533-773641 Telex 343629 JRH1HD

Designed and produced by qualified professional educationalists

## EDUCATIONAL SOFTWARE

Physics (O level/CSE Revision)  
Biology (O level/CSE Revision)  
Computer Structure (O level/CSE)  
Maths (O level Revision)  
Maths (CSE Revision)  
Science (Revision) (2nd 14 years)

Maths (Revision 12-14 years)  
English (Revision 12-14 years)  
Reading (11+ Revision)  
English Practice (6-11 years)  
Mathematics Practice (6-11 years)  
Arithmetic Practice (7-10 years)

Tables (Practice 2-11 years)  
Spelling (Revises first 10 years)  
Knowledge Game (6-10 years)  
Sports Day (5-10 years)  
Typing (improve your speed and accuracy — timed tests in upper and lower case letters — 100% high rate)

UNBEATABLE VALUE AT £4.95 EACH POST FREE

### O LEVEL/CSE COMPUTER STUDIES

A set of four cassettes are packed with up-to-date knowledge covering the O Level/CSE syllabus. Full tuition with revision questions. Subject areas include:

Data Coding, Data Storage, Computer Arithmetic, Computer Logic, Processing Information, Society and Computers, Computer Structure, Storing Storage.

And much, much more.

Also suitable as a general introduction to the computing field (Maths and Data Process 100%)

FANTASTIC VALUE AT £14.95 PER SET POST FREE

### PRO-FILE (C)

The original and best cassette-based filing system. Use your Dragon as a data filing and retrieval system. Hundreds of entries throughout the home and school business — saved by discloses, documents, formlets, etc.

Output to screen or printer

50-page entry to user manual with full instructions

Prints out everything it needs and does it well (What's New? November 1983)

One of the best entries of its type I have seen. Ideal for the novice. (PCW December 1982)

£5.95. Visit our nearest reseller

£9.95 post free

## MICRO DE-BUG CONSULTANCY

Dept U, 60 Sir Johns Rd, Selly Park,  
Birmingham B29 7ER. Tel: 021-472 7610  
Also suitable for Tandy CoCo Computer.

# Reach for recursion

**Paul Givens introduces programming in recursion**

MANY readers may have heard of the term Structured Programming and of how Basic isn't capable of such programming. Structured programming really means "ordered" as the writer races all the various stages in the program, rather than just throwing some code together.

Experts on the subject often favour some language when discussing it for being suitable to support structured programming techniques. However, as a little thought I believe you can support most ideas in structured systems. Pascal has become a popular language because it supports structured programming. One very interesting feature of Pascal is its ability to support a special type of program structure, called Recursion. This is the subject I wish to concentrate on here.

Recursion is a very useful and elegant technique to program with. It allows an enormous amount of code to be reduced to just a few lines. In fact, some problems are so difficult that recursion is the only solution.

In fact, for understanding recursion, you must first accept the idea of a variable. This is the name given to a specific address in the computer's memory that is used to perform calculations. Until now the idea was that if a subroutine gave a value at the start of the program, then in any subroutines it will need the same value. That is easy to understand and is easier to understand.

```
10 DIM SX 100
20 INPUT H
30 V=1
40 GOSUB 1000
50 PRINT #1;FACT0PER1,
&V
60 GOT0 40
1000 IF H=1 THEN
    RETURN
1010 GOSUB 2040
1020 V=V+1
1030 H=H-1
1040 GOSUB 1040
1050 GOSUB 1040
1060 RETURN
2040 F=U/H
2050 SH=SH+F
2060 SH=F+1
2070 RETURN
2080 'POP SI 3020 H=M? V
2090 V=M+1 3030 RETURN
```

Listing 1: the basic source

However, recursion takes the idea that every program and every subroutine have different variables. That is, the variable *A* is used in the program and *A* is also used in a subroutine, then they are entirely separate. Changing the value of *A* in one subroutine will have no effect on the *A* in the main program unless you specifically programme it to.

When you look at the structure of the GOSUB instruction you will see this is used there. The variable names used to denote the function are created by using it elsewhere. For example:

10 DEF FN(A)=SIN(A)\*2

## Function process

Here the variable "A" is used simply to show how the function is to proceed. It does not act as a specific operation on the contents of "A". Once you have adopted this way you can proceed to recursion. Recursion uses this idea of "local" variables to control what it does. The best way to show this is by the following example:

To find the factorial of a number, it is necessary to multiply itself by one less than the number and by one less than that and so on, until the resultant is equal to 1. Therefore:

```
FACT0R1 OF N = IF N = 1 THEN
    CLSC
    ELSE FACT0R1 OF (N-1)
    End If - this is how it works
FACT0R1 OF 4 = 4 * FACT0R1 OF 3
FACT0R1 OF 3 = 3 * FACT0R1 OF 2
FACT0R1 OF 2 = 2 * FACT0R1 OF 1
FACT0R1 OF 1 = 1
Therefore FACT0R1 OF 4 = 4 * 3 * 2 * 1
= 24
```

In order to solve this problem you can use recursion and so need a language that will allow you to call a subroutine from within itself without destroying the state it holds. That is, the routine FACT0R1 needs to call itself but it shouldn't destroy *N*.

Since BASIC does not support local variables, programmers must do this themselves by using an array as a form of store. Here, whenever the routine is called its data is stored in a specific section of the array. Then a pointer is moved to another section. This continues until it is time to return from the routine. When the loop goes that pointer is moved back to its last bit of data which is then released. The removal of data continues until the array is empty. This supports the local variables and BASIC itself will support the repeated call upon a subroutine.

Type in the sample statement below and run it.

10 SUBROUTINE 10

After a few seconds you will get the message OM — ERROR! the Out of Memory error. This is because the subroutine has called itself consecutively. When it relocates it calls the pointer in memory it is called that is saved so that when the routine starts it can jump to that point and continue on. Therefore, this statement keeps saving its return address until there is no more room left. This shows that BASIC can still a subroutine from within itself.

With this information you can now type in Program listing 1 which is the factor module. Here *N* is the number typed in and *V* is the value of the factorial. Subroutine 1000 is the Factorial part routine 2000 saves or prints the variable. At my storage and routine 3000 releases or pops it back out.

Once this is understood, recursion can be used to create many impressive results. Types in program number 1 and run it here. The program first creates a circle on the last screen and then, prints it. This routine is handy for low-resolution graphics as it is quite quick to type in and is very accurate in fitting in a circle.

It works by calling a subroutine to print the centre of a certain size location. The routine first checks if it is at the centre of a circle it will end. Then the point selected is tested to see if it has already been painted. If it has then again the routine will return. Otherwise the routine will add the key location and will see if it can paint itself in the next direction then switch over and finally return.

Since the *V* variables are only changed by adding or subtracting 1, there is no need to store them as they can be stored when the routine returns by reversing the addition or subtraction. The routine seems to stop once the shape has been painted however. The program is still

```
10 CLSE
20 CLS
30 GOSUB 1000
40 END
50 PRINT #1,_

Listing 2 presented to us earlier than anticipated.

It's running until you heat a keyboard. This is because the program has to check all of the shapes to ensure it has flagged it as correctly.

The program can be speeded up by erasing the part of line 2040 that checks if the x and y vertices are orange. This is only advisable if you are certain that the shape will not leave the print out. It does look like this line must exist or we won't have colour.

The final listing (Program 3) is very difficult to explain so it is freely available.

With Reprographics and so I merely present it for your use if not for your understanding. It is a further version of the various programs used to find the permutations of various letters and numbers.

Each permutation is given, rather than a random cross sample dependent on the RAND function. It will occupy quite large areas, that is to say, eight pages, but it takes a great deal of time to go through more than about 5 or 6 characters.

There are many textbooks available that discuss recursion (see points) and I suggest

that you refer to these if you want to try any further experiments. Even if you don't understand this topic you can still use the "Print" and "Permute" routines in your own programs. ■

## 4 Colour Printer/Plotter **Sakata SCP800** only £179 + VAT

Prints and plots using four colour pens on plain paper from 4" to full A4 size, in single sheets or continuous.

Available with standard centronics as well as serial interface (T.T.L. level) with RS232C adaptor option.

**Also available from Statacom**

**A full range of top quality 5½", 3½" and 3" drives.**

Supplied with leads, cables and utility discs with or without power supply unit. All finished in attractive metal case. Delta Controller available £120 inc. VAT.

To order for your Christmas stock, or just for more information contact our sales dept. on 01 661-2266 or write to us at:

**18 GROVE ROAD, SUTTON, SURREY**

# DRAGON OPEN FILE

Send us your Dragon programs, beginning with a general description and then explaining how the program is coded/recked. Take care that the listings are all bug-free, uncluttered, a cassette ready, if possible, a printout. We pay £6 for each original bug-free program published, double for the program of the month. If you have any problems with the listings, please send your queries to the appropriate author, Dragon Open File, 10-12 Little Newport Street, London WC2H 7PR.

## Stitchet

From Graham Smith in Bristol

This is a short program to produce an interesting cross-stitching pattern. My daughter enjoyed typing it in as a type of program which produced a rectangle

based pattern. I therefore produced this slightly different program of similar length to maintain her interest. At present the shorter and simpler programs are much in demand by my children.

## Sound

From R. Stimpson in Chelmsford

This BASIC program makes good use of the Dragon's AUDIO command to produce a continuous chirping soundwave as file changes in a piece of music. You can use a cassette tape or feed the output of a hi-fi system into the cassette input. Some cassette recorders output an amplitude signal on their telephone output when set to record so you could even use a microphone as a sound source.

The program also demonstrates the use of DATA statements to pass parameters between

Basic and machine code. The first call simply counts the number of tracks on the cassette input (CDS PORT A) in a timer interval given by parameter T. The count being returned to variable A. After building up a significant oh-ing patch a pause is inserted according to the value of A and two more user subroutines are used to make the journey of the test forever!

High frequency noise will ruin the effect so a fairly clean sound input is required.

### Program notes

10-30 Data screen line on cassette sound and Reserve machine code source  
 40-50 Machine code to read the cassette

60-70 Machine code to read the next quarter of the screen down  
 80-90 Machine code to position the next quarter of the screen up  
 100-120 Initiate machine code start tape and set up count period  
 Read signal modify T to accommodate the signal and loop if the pitch has not changed much  
 Sound colour roughly in order of luminosity  
 Colour the screen moving up words for increasing pitch downwards for decreasing pitch  
 210-220 tidy up and loop  
 230-240 Poke machine code

## Ski-rump

The idea of *Starline* is to guide a plane from the top of a six slope to the bottom. You have a set course to follow and you have to keep between the flags. You get four tries to start with and you lose one of them when a crash ends a flag.

The cursorticks are used for moving the cursor in the appropriate direction. When an

never buy or possess the genetically altered or their  
another person's human embryo.

The data statements between 200 and 370 consist of a number and the *set* identifier (the first part), identifier 2 is always identical to the previous.

# COMPUTERWARE

QUALITY SOFTWARE

FOR THE DRAGON 32/64

AT BARGAIN PRICES!!

## LINKWORD

HERE THERE BE THE TOP SELLING DRAGON GAME OF 1985!

The full colour capabilities of the computer are used in the game for 2 to 4 players where the object is to score points by forming words on the board. The computer calculates all scores for every possible word combination, including double and triple letter scores, double and triple word scores. 80 levels etc. Features provide for operating in two operating or challenging difficult levels, timing, music, graphics.

One Sample Price £12.50

### PORTOON

Fifteen colour high resolution graphics. Area 256x161 at 11 level speeds of transmission of 8 x 16x8, 7, 4 etc transmission account. £2.95

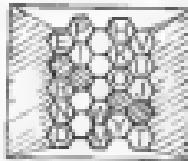

### PIKE, THE PUZZLER GAME CONNECT 4 & 6 PIECEFUL, PIERS & POKES

The features connecting four circles in a row, LOST CRATE, just one lost part is part of a picture with a solution over 1000 lines within passage

### DRAGON CHARTS

An innovative simulation of the game in which you may develop your shooting skill on the keyboard to achieve the high scores! (1000+ levels)

### BLOCKBUSTER GAME

At the top of the TV game adapted for 2 players. Contains 100 questions ranging from very easy to very difficult. Full-colour high-resolution display. £2.95

# A QUALITY LIGHTPEN

for the DRAGON 32 microcomputer

### S.25

INCLUDES: S.25A, P.P. Two different drawing programs provided with this lightpen. S.25CII and S.25I-CREATE. S.25CII is a superb high resolution colour drawing program allowing both precise drawing and freehand sketching, penning etc. S.25I-CREATE is a high resolution library image drawing program.

### REFERENCE PROGRAMS

- Total storage of your work
- Cross reference facilities
- User friendly provided utilities and an interface

Also available for VRC-20, CBM 64 & BBC-B. Please state your machine when ordering.

Send cheque or PO to: Datapen Ltd,  
D.U.I. Datapen Microtechnology Limited,  
Kingcote Road, Overton, Hants. RG25 3JB

Or send S.A.E. for details. Now available from good computer shops.

### REFERENCE DRAWINGS

- Instructions to control of lighting
- Preparation of different colours
- Program accessible LED lamp socket
- Switch for program control

This differs from all other lightpens available for the Dragon in that it is far more sophisticated. Instead, this program places many exciting demonstrations for everybody at the Dragon. (Please contact Datapen for further information. See left)

# Bookbytes

Books: Books for your Dragon 32/35/364 etc.

Author: Gary Marshall  
Publisher: Arrow Books  
Price: £3.95

THESE ARE more and more books for the Dragon coming on the market which looking for a new angle and a new gap to fill. This one is designed to capture the market created by the growing number of Dragon 32 owners. A good number of them are 32 owners who have upgraded from 35s.

The first subsection supplied by the manual sections of the 32 proving adequate when it arrived is a book exploring the differences between the machines, and goes

into the user some hints about using the extra larger memory. Manufacturers also need a comprehensive guide to the full Dragon 32s. Unfortunately this book fails to measure up on both counts.

I could find nothing on the whole book specifically pertaining to the 32. No mention of the use of the auto-boot facility nor the use of the ROM25 interface. The word ECHO — which puts the machine into 32K mode — does not appear nor the use of the USA's language files. The bug has been ironed out.

One chapter mentions how and where you can use with the machine but the most important accessory to 32 users — a disk-drive — and the difficulties caused by the overwriting of the cartridge port in 32 made no space.

One of the advantages of the increased memory since

is that the full run of all its graphics and many pages does not need to be compressed even with every logical programme. However, only two pages of the book are devoted to free graphics. This is despite the knowledge that the Dragon 32 plays impressive graphics and sound programs.

Some very interesting basic can be learnt from the book — but you'll get beyond PRINT, INPUT, READ, DATA and very simple file handling you will be wasting your time with this one. Only 20 statements are covered and the programs given for you to type in — for example a snake, invaders, games and the like — tell much

Mike Hanson

**Book: Programming the Dragon 32**

Author: Peter Lantony  
Publisher: Prentice-Hall  
Computer Books  
Price: £9.95

ONE OF the most thankless tasks must be to write the instruction manual which accompanies every microcomputer. To fulfil this difficult task the absolute novice who has just unboxed his first computer and is the guilty know about the intricacies of the newly-arrived beastie of the machine must be assigned to produce it. It is perhaps inevitable considering the dual role that these manuals have that many come to far from scratch of criticism.

Programming the Dragon 32

is the second book I have written for the Dragon 32. No mention of the use of the auto-boot facility nor the use of the ROM25 interface. The word ECHO — which puts the machine into 32K mode — does not appear nor the use of the USA's language files. The bug has been ironed out.

One chapter mentions how and where you can use with the machine but the most important accessory to 32 users — a disk-drive — and the difficulties caused by the overwriting of the cartridge port in 32 made no space.

With this in mind, it is a pity that a copy of *Programmatic* (the Dragon 32 is not included) isn't every Dragon computer. There is a chapter written account of how to use the Dragon starting with the basic principles, and in which the author never loses track of the fact that the reader might be programming for the first time. This is not to say that the more sophisticated commands are not dealt with again in a straightforward and easy-to-understand manner. The author is obviously very well acquainted with the Dragon and some of its subtleties and gives some hints and advice throughout the book that even consider both might find very useful.

However, it is at the beginning that this book is primarily aimed, and it is caused with both short sections illustrating the effects of the various commands and also with lots of complete programs. Many of them particularly long ones, are incomplete from space invaders and test measures to digital clocks and tessellations.

Throughout it is extremely well-written and informative and its easy-going style makes the text easy to take in. It is a general idea along the lines of *Basic* as opposed to many manuals which appear to make programming resemble an assault on the right hand of the tiger. Definitely a must for all but the expert. Gordon Lee

**Book: Creating Adventures**

Written for your Dragon 32  
Author: Chris Colford  
Publisher: Interlink Publications  
Price: £3.95

HOW ABOUT writing your own adventure game in your own home?

attack in pieces by rats, men, men, men or light? spot coffee on carpet. Now where is Roger? It matches with what?

Well, perhaps nothing exciting happens around your house, but imagination can run wild. We now have solid oriented code so you're not stuck printing adventure — Go On,

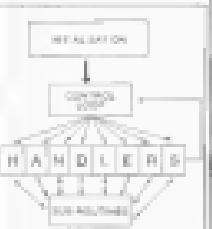

and all. Anything is possible with the help of Chris Colford's book.

The book not only teaches you how to structure and create adventure games but also how to customise them to your own interests and tastes.

Adventure gaming can offer a real challenge to those tired of alien zapping and the like because there's full programs each of a different type of adventure and each designed at a certain difficulty level. As is the strength of this type of game — the whole is so much more fun put together than the parts.

Chris Colford's style is to show how four elements in the program — initialisation, the control loop, handlers and the subroutines consequent upon these — interact and can be modified to suit your own ideas. These modules and a few general purpose ones fit the title like the key to a lock.

The book is easily digested and the largely self-explanatory programmes and index are quick and a chapter on how to add assets and graphics to your programs.

Mike Hanson

## Mizardl

### SoftInvaders

**NEW**

**£5.95**

#### STARTING INSTRUCTIONS

A dragon invasion is coming to Earth, so you must defend your planet from the invaders. You must collect energy crystals to power up your weapons and defend your base. Defend the base by shooting down the invaders with your laser beams. You must also collect energy crystals to power up your weapons and defend your base. Defend the base by shooting down the invaders with your laser beams.

**NEW**

**£5.95**

#### TIME PORTAL - The Staff of Life

The Staff of Life is a time travel adventure game for the Dragon. You play the part of a man who has been transported back in time to the year 1066. You must find the staff of life which will allow you to return to the present day. A game of logic and strategy is required as you try to progress through the various levels of the game. Special instructions can be had from the TIME PORTAL.

**NEW**

**£5.95**

#### COMPUTER FRUIT

A 3D fruit machine simulation program for the Dragon computer system featuring 10 different fruits including Apple, Orange, Lemon, Pineapple, Watermelon, Grapes, Cherry, Pear, Peach and Melon. The fruits are randomly selected and the player must identify them correctly to win points.

**NEW**

**£5.95**

#### PIZZAPORTER

A pizza delivery program which simulates pizza delivery. It consists of a menu screen, a delivery screen and a delivery report screen. Delivery routes can be set to either left or right turns. Delivery reports show time taken and total distance travelled.

# MICHAEL GERRARD'S ADVENTURE TRAIL

THIS MONTH begins with a plea from reader M. A. Peacock of Des Moines who's daughter was given a copy of *El Dorado* last Christmas and Christmas itself finds the family Peacock still stuck in the childhood adventure. The disease of Dragon-Data means there's no one they can consult for further clues and having only so far been able to obtain the Order they're requesting for some hints as how to proceed further. This is an adventure I've not seen so if any residents out there have got beyond the Order perhaps they'd let me know and I'll pass the clues or place them on the *Dragon-User* of *El Dorado*. Of course, if anyone has a spare copy of the software...!

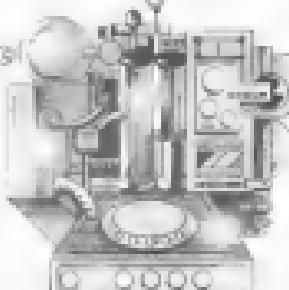

Tons of postscript lie in a letter from a reader in Kent whose name I regrettably forgot as he was asking for advice on adventures he could give his son whom he describes as a bright nine year-old. Passing the lampoon on to *El Dorado*, I recommended the various *Mysterious Adventures* from *Charles H. Gifford*, who also has a missing link issue for 1985 down from £9.95. I suggested the *Mysterious Adventures* because they're fairly straightforward, with every object having a purpose and although it's difficult to know what will put a particular person off the *Charles* titles would put that age audience.

Also recommended as possible gifts were the four recent Dragon-Data graphics adventures *Sax Onyx*, *Cobley Island*, *Black Barnum* and *Shetlandgate*. Another reader has written in about *Colossus* himself which is quite a tricky game and the letter is interesting because I'm not sure if the reader hasn't been led up the garden path somewhere along the way. Mr M. Frederick of Bexhill says readers are so formal you are allowed to put your Christian names, you know! says that, having looked the review I have been unable to find out where he returned to. At the beginning of the adventure I did not know the professor's name and perhaps there would have constituted a clue. Another problem is that having borrowed *Colossus* from *That's All Right* he had I could not then find the imported version which had disappeared from the library field in order to return to the professor's study to find out if the keys fitted his door.

I've a reasonable suspicion that the

softs like *Colossus* sales is maybe the problem that you find fairly early on in the game. The reason for this is that what you went from *Teaser Jack* is the machine not the keys. You then use the machine to heck a path through the jungle and later on you find a cue for the jeweller telling you to "unlock you to get the main treasure which is a chest". Then you have two trips back to the professor's laboratory and step it, to complete the adventure. Don't I sound like a *Braveheart* and *Monty Python* mixed though for the last mystery adventure the ending is rather disappointing — you get all that way and then the final thing they ask you is if you want to play again.

In *Colossus* I found I needed the professor's notes either but it didn't stop the getting it through and I suspect had the suggestion of buying the helicopter device that would you from the laboratory to the nearby land. Maybe other readers can shed some light on this mysterious disappearance.

A device of similar design to the *Dragon-User* series *Time Machines*, is available for the Dragon-32 and 64 for £3.95 both versions being on the same tape. The control program knows which machine you're loading it into and reacts accordingly. The *Mysterious Adventures* series of softs to the same format, and so-called students are being given as kind of reading what this is as I am of writing it, as well as giving a review this month — and can request relatives only have it mentioned to them.

All adventures have a range of options but *Time Machine* starts you off in one — I'm in a strange bog on the moon

and NORTH-SOUTH EAST WEST typing "N" for *Inventory* informs you that I'm carrying *Topo* is strapped. Fine enough so nothing to drop but purely foul and wrong to keep you way out of the foggy moon. You can come back later when you are carrying objects and discover the image is every anyone commanded indeed.

The reason you're out on the moon on such a terrible night, instead of sensible staying indoors and watching *Blader* is that you are an *et al* news reporter from the *Telegraph* and *Dundee Courier*. You've been removed from your usual duties of reporting local town street and personals etc. to bladders to investigate strange goings on at the deserted house on the moon. Having come partly at 10 meters you should have more power but local people have seen strange lights and heard weird noises, so off you go to discover what the *et cetera* *Dr Putter* is up to.

From the moon you can make your way to the house and obviously consuming glasses and a bell *RING BELL*, of course, but two rings and two doors later nothing has happened so round the corner to find a window. Years of brutal *Dragon* game playing ensues you don't notice living all *handy-pandy* you *SHOOT* *SHOOT* thinking that's naturally taken the precaution of sealing the glasses first — we don't get caught *Bob Bob*! Inside the house you make your way to the cellar where there's a *Strange Machine* and a *curious robot* and that latter provides you with the message — *Find the Pass* phone that controls my machine *Rescue me!*

Now don't worry your head about how someone who's obviously been sent off in a *Time Infection* can possibly have inserted a message like that in a cassette machine that's been set forward but instead *GO MACHINER* to see that there are indeed three *empty* rollers just waiting to *LOAD IT* *LOAD IT* not to mention two *bullet* marked *TOP* and *BOT*. The *empty* item is either the phone and this will take you to *Rescue* in inverted to reading *bags* and *spiders* — the *curious* *Mysterious* folder though there seemed to be less in his stomach than a stone of them... or maybe I just haven't got the enough and if yes if you've read and before then you'll know what to expect but if you haven't I think I wouldn't particularly recommend starting with this one. ■

# What's your best source of information on color computing?

Now you can improve your color computing skills and it's easy to do. **HOT CoCo** gives you more practical information on the Dragon® than any other publication. Nearly 100 pages a month!

Every issue is packed with exciting new things for you to do. We won't waste your time with filler stories. You'll get informative columns:

- Old-timey Arcade—enjoy old-fashioned arcade style games on your computer.
- The Basic Beat—learn everything you need to program in Basic.
- The Educated Guest—discover how to use your computer as a teaching tool.
- Doctor AMCI—get answers to your technical questions.
- Graphically Speaking—create eye-catching designs that will appeal to your programs.

You also get a dozen easy-to-understand articles every month. Games, editor programming techniques, tutorials, graphics education, hardware projects. They'll help you expand what you can do. And complete programs let you show you how to use what you learn.

That's not all. **HOT CoCo** saves you money too. Good readers help you make every purchase a sound investment.

- Informative ads let you comparison shop from home.
- New product announcements tell you what's available before it reaches the stores.

With all that at your fingertips, your subscription could pay for itself with one who purchases.

And **HOT CoCo** is risk-free. If you don't like your first issue, just write "cancel" across the envelope and return it to us. You won't owe a thing.

Schedule to **HOT CoCo** today. Twelve big issues are only \$44.97 (US funds drawn on a US bank). Simply fill out the coupon below and return it right now to **HOT CoCo** Subscription Dept., PO Box 975, Farmington Hills, MI 48336, USA.

## Character DRAWING

Could you please tell me if there is any other way of moving DRAGOS characters other than using the LEFT and RIGHT commands on the high resolution screen. I understand that STROKES works but I can't seem to get

Chris Hunt  
Brenton  
Victoria

I THINK the method you are referring to is to use the Draw command with variable x & y co-ordinates given using STROKES. To draw an image at x,y from the starting (0,0) use the following:

=STROKES-(0,0,0,0)+,-,+,-,219,0  
(1)-,20

The user can use a similar method to obtain variable colours, angles and stroke sizes in the draw command.

Please tell me if it is a problem with the Dragon 64 or the game.

Paul Miller  
Dunstable

For

ALTHOUGH the Dragon 64 operates as a Dragon 32 when bootstrapped there are some extra keys in the 128 cartridge which have been removed from the Dragon 64's keyboard due to there is no need to put in additional characters before the 64K memory limit case that a Dragon 32 will run the program to work on your Dragon 64 replace line 2 with 2 # - BASIC# PICTURE

This is pointed out in the Dragon 64 supplement booklet but no reference it would seem either of the bug had been left in the 64's ROM.

8812 2P6 You should order estate number 881200. The game costs £10.00 plus £1 post and packing

## Graphics savings

I AM currently writing a graphics program for my Dragon 32 and I feel strongly that there was a command for saving a graphics page by the use of COLOUR

I would be grateful if you could tell me the command and also how to load it back into the computer

Tony Cooper  
Aylesbury  
Bucks

THE COLOUR command can be used to save graphics pages quite easily. To save the graphics currently displayed use

COLOUR: saveme: PEEK(1989)  
+384 -PEEK(1971), PEEK(1951)-  
384 -PEEK(1949) 0

This puts the start and end address of the current graphics selected and saves this block of RAM. If you take the addresses you can see them directly on screen, but using the method will also take account of data and so on.

To read the graphics, simply use CLS:CMD: however, you can specify an offset in the CLS:CMD command if you don't want the graphics loaded back in the same place

## Cassette lead

WOULD you please tell me where I can purchase a Dragon 32 lead which connects to the cassette recorder. I have tried everywhere in Britain but no shop stocks them

Harvey Stott

# Competition Corner

Answers to Competition Corner  
Dragon User, 15-17 Little Newport  
Street, London WC2E 7EP

THESE are levels where an apparently straightforward piece of programming can give rise to problems. Some of the levels — though rather esoteric — features of the Dragon are overlooked.

## Trigonometry

Take the following simple problem. You wish to determine the height of a flagpole and find that at a distance of 10 feet from the top of the flagpole there is an elevation of 26 degrees from the ground. Elementary trigonometry tells us that the ratio of the height of the flagpole is equal to the tangent of that angle multiplied by the ratio also given — in this case the distance along the ground to the flagpole.

# Record space

Gordon Lee sets the problem,  
Cable Software provides the  
prizes

radii. Fortunately it is easy to convert degrees to radians and vice versa.

To convert degrees to radians divide by 180 and multiply by  $\pi$ . To convert radians to degrees multiply by 180.

Using this fact the correct height of the flagpole mentioned earlier would be given by

`PRINT TAB(5,10) SIN(26)*10`

which gives 83.8168 — the correct answer.

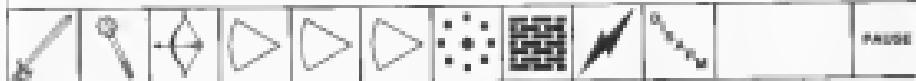

What is not on the subject of trigonometry is the sine, cosine and tangent of an angle can be accessed directly from the keyboard using the commands `SIN`, `COS` and `TAN` respectively. The inverse of the tangent is also available (`ATN`) but not unfortunately the inverses of either sine or

corresponding angle. The latter is in the formulae refers to half the perimeter — that is  $(a + b + c)/2$ .  
 $A + B + C = 180$  degrees or  $\pi$  radians.  
 $a^2 + b^2 - c^2 = 2ab \cos C$   
area of triangle =  $\sqrt{(s(s-a)(s-b)(s-c))}$   
 $\tan(A/2) = \sqrt{(b-a)(c-a)(b+c-a)}$

## Table

Here is the month's competition problem. I have two rectangular boards, one 12 inches in diameter and the other one 10 inches. They are lying on a table with the 12 inch side top. If the smaller circle is entirely contained within the area of the larger, the area of table covered will be a minimum (up to the area of the 12 inch disc), but the area of overlap of the two

So we might begin with the computer command `PRINT TAB(10,5)*100`. The world goes up an answer of 42.6430 feet which we might reasonably suppose is correct. However there are important features of the Dragon — and most other computers — that we have forgotten. This is that all angles handled by the computer must be given in radians not degrees. It is perhaps unfortunate that in a world where the degree is the standard unit of angular measure this should be the case. It is much easier to visualise what is meant by 26 degrees rather than 0.453602342.

## Prize

**CABLE SOFTWARE** is offering 10 readers a chance to win an arc flight game for the Dragon. The games distributed by PCS, featuring usually three and 20 different screens, and full colour animation.

**Superball** — a simulation of American Pro-Football starring Floyd of the Dallas Cowboys. **Quakeoids** — a Hungerford hybrid with 10 screens and four levels of difficulty. **Zaxxon** — featuring an arc helicopter pilot leading a dangerous mission into Venus. **House Bass** — a light spatial laser battle and energy bolts. **Space Blaster** —

cosine. These can be calculated indirectly from the ATN function using the formulae: inverse sine = `ATN((X*Y)/(Z*Z))`; inverse cosine =  $-1.570796 - (\text{ATN}(Y/(Z*Z)) - 3.14159)$ .

Note that the formulae given in the Dragon manual for these functions are incorrect. Following are some further formulae relating to triangles which may be found useful. They relate to any triangle the capital letters A, B and C referring to the three angles and the lower case letters a, b and c the three sides. In each case each side is the one opposite the

angle the Trigonometry you work your way around the more punishing for keys to enter the correct answer. **Fighting Fantasy** — an arcade adventure with 20 different screens, and full colour animation.

## Rules

To win the answers you must show both the question to the competition editor and provide a. Please do not send in a computer containing the answer. All a. No breaker compiled the following sentence in 15 words or less. b. Write Cable Software six letter games for my Dragon because

this will be at a minimum (by taking the upper case, otherwise the area of the table covered will steadily increase while area of overlap will decrease. Eventually the two discs will be side by side giving maximum coverage on the table but with no overlap).

A point goes during the operation, the area of overlap will be nearly equal to the non-overlapping parts of the discs. **How far apart are the centres when this occurs?** (In solving this problem the centres should be regarded as solid discs — no allowance need be made for the two holes in the centres). ■

Your entry must arrive at Dragon User by the last working day of January. The winner and the solution to the competition will be published in our April issue. Entries will not be returned and are passed onto the competition editor on the result.

## October winner

The WINNER of the October competition and recipient of £500 worth of software from Spectrum is G. C. Faulkner of Macclesfield in Mid Cheshire who had a score of 42 beating the joint runners-up by one.

# St. George now has two choices!

Red or green will slay the Dragon

- ▲ Nylon encased-Steel shafted joystick with ball and socket joint.
- ▲ Fast sprung return to centre.
- ▲ Graphite wiper linear potentiometers.
- ▲ 12 Months Guarantee.
- ▲ 7 day Money back Guarantee.

Complete control at your fingertips

The smooth control of the Voltmace delta sprung return joystick is now available in Dragon colours. Each joystick has been individually tested before it leaves our factory. Following extensive robot testing we prove the design has lasted to more than 2 million cycles. This means that not only will your joystick be strong, tough and reliable,

but it ensures long life, accurate control and with the choice of red or green

fire buttons,  
plus instant  
recognition  
between the  
left and right  
joysticks.

If you are  
not completely

# TIME BANDIT

Tired of games that have only a few screens or force you to follow strict levels?

Well dragon no more! In Time Bandit, you virtually create your own game! You can choose from "twelve" places throughout the game, with more than "thirteen" distinct variations and levels of difficulty in each place; this means over 300 different variations!

You must use the "Time-Gates" to travel to each of the 3 different Worlds of Time, each containing a multitude of colourful and unique adventuring areas. Visit the medieval Dungeons of Fantasy World, recapture the days of yesterday in Western World, and search for the Stars in Future World. Do battle with the Evil Guards, Looting Lurkers, Angry Almos, and the Killer Sasquatch! Find the keys and escape with the treasures of time.

Color Graphics, Full Colour Animation, Great Sound,  
300 Screens and 100% machine code.

At all Herald

Requires 1 joystick

Tandy colour version requires 32K non-extended basic and is available only at Tandy stores.
